

Applied Math 5460 Spring 2008

Dynamical Systems, Differential Equations and Chaos

Class: MWF 10:00-10:50 PM ECCR 155
Instructor: J.D. Meiss ECOT 236 jdm@boulder.colorado.edu
Office Hours: M,Th 1-2, F 11-12

Text: Differential Dynamical Systems, J.D. Meiss (SIAM 2007)
(\$55 from SIAM <<http://www.ec-securehost.com/SIAM/MM14.html>>)
Prerequisites: Undergraduate courses equivalent to APPM 2360, 3010, and Math 4310

Outline

Dynamical Systems & Modeling

Linear Systems (Review)

- Eigenvalues and Vectors
- Exponentials of Operators
- Floquet Theory
- Stability

Existence and Uniqueness

- Contraction Maps
- Lipschitz Functions

Dynamical Systems

- Flows
- Stability
- Lyapunov Functions
- Topological Conjugacy
- Omega Limit Sets, Attractors Basins

Invariant Manifolds

- Stable & Center Manifolds
- Normal Form Theory

The Phase Plane

- Topological Phase portraits
- Poincaré-Bendixson Theory
- Index Theory

Chaotic Dynamics

- Lyapunov Exponents
- Hyperbolicity
- Strange Attractors
- Homoclinic Bifurcations to Chaos

+ at least one more topic:

- Bifurcation theory
- Perturbation Theory
- Hamiltonian Systems

Web Page & Software: I will be posting homework assignments, Maple or Matlab notebooks, corrections to lecture notes, etc on the web page

<http://amath.colorado.edu/courses/5460>

Maple is available for \$75 by a special deal using promotion code AP33546 at
<<https://webstore.maplesoft.com/>>

Grading: Grades in the course will be based on:

- (i) homework sets (assigned roughly biweekly during the semester). (60%)
- (ii) Class participation (10%)
- (ii) Project presentation and report (30%)

There will be no exams.

Ground rules for the homework sets are as follows. You may use any reference book from the library. You are encouraged to discuss the homework problems with other students in the class, and even to work on the problems together, **until** you get to the point that you understand how to solve the problem. Each student is required to write up and to submit his/her own homework. You are **not** permitted to copy another student's homework, even if you worked on the problems together.

Projects: I will give a list of possible projects around the 2nd week of class. You should select your project and have it approved by me by the 4th week. Projects will consist of a 15 minute presentation to the class during the last week of the semester or the final exam period and a written report. Project can involve computation, but need not.

Special Accommodations: If you qualify for accommodations because of a disability, please submit to me a letter from Disability Services in a timely manner, so that your needs may be addressed. Disability Services <<http://www.Colorado.edu/disabilityservices>> determines accommodations based on documented disabilities. Contact: 303-492-8671 or Willard 322.

Religious Observances Campus policy regarding religious observances requires that faculty make every effort to reasonably and fairly deal with all students who, because of religious obligations, have conflicts with scheduled exams, assignments or required attendance. In this class, please let me know of any conflict at least two weeks in advance. See <http://www.colorado.edu/policies/fac_relig.html>

Academic Honesty: Students may discuss homework problems with each other. However, all work turned in must be your own. Violation of the CU Student Honor Code <<http://www.colorado.edu/academics/honorcode/>> will result in a course grade of F.
